JOINT PRESS RELEASE

Melbourne, Australia, 23rd March 2019

New research: 84% of water samples around the world polluted with negative subtle energy

A team of researchers of Maharshi University of Spirituality (MAV) and Spiritual Science Research Foundation (SSRF) recently discovered a very high level of emission of negative spiritual energy in water sources around the world. Out of 140 randomly taken water samples from 25 countries, 84% were found to emit negative energy and only 16% emitted positive energy. This significant imbalance indicates an increase of spiritual pollution in the environment, which can lead to physical, mental and spiritual health problems, and is also linked to climate change.

After a 12 month study, in March 2019 the Maharshi Adhyatmavishwavidyalay (also known as the Maharshi University of Spirituality) and SSRF published research findings about the subtle energy emitted by water in order to gauge the spiritual purity or spiritual pollution of water on a global scale.

Samples were taken randomly from various locations in 25 countries from 6 continents. They included naturally occurring sources such as rivers, lakes and seas, as well as processed water sources, such as bottled water, swimming pool water and municipal water. Samples were also taken from places of religious worship.

The research was performed using the Universal Thermal Scanner (UTS), an instrument developed by Dr Mannem Murthy, a former nuclear scientist. The UTS scanner has the ability to detect negative spiritual vibrations (denoted by readings related to the infrared and ultraviolet spectrums), positive spiritual vibrations, and the total energy field (aura) around an object.

Dr Mukul Gadgil, PhD, who is a senior research faculty member of the Maharshi University of Spirituality stated “Through our previous research on soil samples, we were already aware that there is a general increase in negative energy in the world. However, with this new research, we discovered that there is also a significant increase in negative energy in water sources as well. Spiritually impure water is detrimental to society’s general wellbeing, impacting us at the physical, psychological and spiritual levels. Our research has shown that when negative energy increases in the environment, it is linked to climate change, increasing its adverse effects. So, it is a serious matter that warrants further study. We call on scientists interested in this research to join us in this endeavor.”

The key findings from the research were:

1. The majority of the water samples emitted negative energy and it was observed that the spiritual impurity of water worldwide is on the rise. In fact, the increase in negativity has been so significant that the top 10 negative samples from 2018 have all been surpassed in terms of negativity by samples collected in the first three months of 2019.

2. The physical purity of water is not necessarily indicative of its spiritual purity as they both work on as they both function at different levels. For example, the research has shown that some water samples such as water from pristine Alpine springs, or high-end commercial bottled water emitted negative energy. On the other hand, water from some rivers which are more murky emitted positive energy.
3. The highest levels of negative subtle energy were found in tap water. The water at some places of devotion was found to be highly positive. Paradoxically, it was found that some samples deemed to be holy water emitted negative vibrations.
4. The upper and lower limit of positive and negative energy field emitted by the water samples was found to be 15.7 meters (51.5 feet) and 5.75 meters (18.9 feet) respectively. This shows the immense range of vibrations that water samples can have.

Mr Sean Clarke, senior researcher at SSRF added “March 22nd was World Water Day and various discussions started about the preservation of water sources and global reduction of water pollution. We feel that it is the right time to also start a discussion about the spiritual aspect of purity of water and to take preventive measures not only at a physical level, but also at a spiritual level to protect the environment and reduce the negative impact of spiritual impurity of water on humanity.”

Spiritual Science Research Foundation (SSRF), is registered in the USA, Australia and the EU. It is dedicated to researching the spiritual dimension with the intention to demystify the spiritual realm and provide research that will help every individual to effectively alleviate difficulties in life and progress spiritually. Since its inception, the SSRF website (www.ssrf.org) has been visited by over 50 million visitors.

Maharshi University of Spirituality is a premier institution for spiritual learning. It has been established to guide the people in their spiritual journeys for faster spiritual progress and to research the spiritual dimension. Its spiritual research center is located in Goa, India. Over the last 2 years, it has published and presented research papers at close to 50 academic conferences around the world. A list of the research papers is available at the website, www.spiritual.university
